Education

- **B.Tech in Computer Science and Engineering** 2023 – 2027
Kishkinda University
- **Pre-University Course (PUC)**
Best PU College
- **Schooling**
Nandi High School

Skills

- **Programming Languages:** Proficient in C, Java, Python with strong problem-solving and optimization capabilities.
- **Frontend Development:** Experienced in building responsive, component-based UIs with HTML5, CSS3, JavaScript, and React.js.
- **Backend Fundamentals:** Skilled in building RESTful APIs and applying basic DBMS concepts for efficient data handling.
- **Software Development Practices:** Strong grasp of modular architecture, code maintainability, and scalable system design.
- **Development Tools:** Git, VS Code, version control workflows, and agile collaboration practices.
- **AI & Productivity Tools:** Applied experience with Generative AI tools, prompt engineering, and AI-assisted development workflows.
- **Soft Skills:** Effective communication, teamwork, time management, adaptability, critical thinking, and problem-solving in real-world projects.

Projects

- **Railway Track Management System**
About: Enterprise-grade Railway Asset Lifecycle Management system with AI analytics, blockchain verification, and real-time monitoring.

Implemented: Built multi-role RBAC architecture (Admin, DRM, DEN, Inspector, Manufacturer), integrated Firebase Firestore real-time streaming, AI-powered analytics (Gemini), blockchain-backed audit trails, QR-based product verification, and PWA mobile support.

Impact: Traceability will increase, reducing manual work and coordination overhead.

Tech Stack: Java, Basics of DBMS

Repo Link: <https://github.com/jasonkennethn/RailTrace-AI-Based-Digital-Identification-System>

- **MedFlare – Medical Digitalization Platform**

About: Healthcare digital transformation platform for centralized patient record management.

Implemented: Designed responsive frontend system with structured UI components for secure data accessibility.

Impact: Improved workflow efficiency and streamlined medical record visibility.

Tech Stack: HTML, CSS, JavaScript, React JS

Repo Link:

<https://github.com/jasonkennethn/MedFlare-Medical-Digitalization-Platform/tree/Main/HK-39>

- **JOE – Cafeteria Automation System**

About: Institutional cafeteria digital ordering system designed to eliminate queue inefficiencies.

Implemented: Engineered structured ordering workflow with scalable frontend architecture and backend integration planning.

Impact: Improved operational clarity and reduced manual coordination overhead in cafeteria environments.

Tech Stack: JavaScript, React JS, Basics of DBMS

Repo Link: <https://github.com/KoushikGIT7/JOE-Cafeteria-Automation>

- **Frookoon Prototype – Blinkit Inspired Grocery Platform**

About: Scalable grocery ordering frontend prototype inspired by modern quick-commerce platforms.

Implemented: Developed responsive component-based UI architecture using React with structured state management and layout optimization.

Impact: Built a scalable foundation ready for backend integration and production expansion.

Tech Stack: HTML, CSS, JavaScript, React JS

Repo Link: <https://github.com/KoushikGIT7/FROOKOON>

- **E-Commerce Site – Tech Gadgets Review**

About: Product comparison and review platform enabling supplier uploads and user-based evaluations.

Implemented: Developed structured UI with dynamic product sections and responsive design principles.

Impact: Simplified product decision-making workflow and enhanced user interaction experience.

Tech Stack: HTML, CSS, JavaScript

Repo Link: <https://github.com/KoushikGIT7/tech-gadgets-2k25>

- **Tic-Tac-Toe Game**

About: Interactive browser-based logic game built to strengthen frontend state handling.

Implemented: Developed event-driven DOM manipulation and win-condition algorithms using JavaScript.

Impact: Enhanced understanding of UI interaction models and logical state transitions.

Tech Stack: HTML, CSS, JavaScript

Repo Link: <https://github.com/KoushikGIT7/Tik-Tac-To-Game>

- **Basic Food Ordering System (Python)**

About: Structured console-based food ordering automation system for efficient billing workflows.

Implemented: Designed modular menu-driven architecture with dynamic price computation and validation handling using Python.

Impact: Strengthened foundational problem-solving and control flow logic implementation.

Tech Stack: Python

Repo Link: <https://github.com/KoushikGIT7/food-ordering-project>

Internships and Hackathons

- **Backend Developer Intern – Frookoon**

About: Worked on backend API handling, database integration, and system performance optimization.

Duration: June 2025 – Aug 2025

- **SIH Internal Hackathon – BITM**

Achievement: Won **1st Prize** for Railway Track Management System.

- **GDG Hubli 2K25 – Google Developer Group**

Achievement: Achieved **Top 15 Position** among competing teams.

- **Bangalore Institute of Technology – Ideathon & Hackathon**

Participation: Participated in Idetattva and Xcelerate innovation competitions.

- **Vision Karnataka Startup Exposure & E-Summit**

Participation: Attended startup exposure sessions and interacted with industry experts and leaders.

- **Python and Green Skills (AI) – Campus Internship**

About: Gained foundational knowledge in Python and AI applications.
